
Wild Brush Energy Corporate Update: 1st Half 2010

Seattle, WA, May 26, 2010- Wild Brush Energy (WBRE.PK) continues to pursue its goals and strategy through collaboration and alliance involving leading international wind and solar companies.

Wild Brush has formed relationships and agreements with foremost wind farm specialists. These include European firms such as Energoconsult Ltd. and Geo-Net Consulting, whose expertise in wind measurement, site assessment, and optimization is crucial to the initial planning stages of any wind farm. Additional experts in engineering and transportation such as Macom Technologies and EuroKran2, have also joined our collaboration.

Turbine manufacturer WinWind Oy of Finland has also agreed to supply turbines for a wind farm up to 120 Mw in size for Wild Brush Energy. A wind park of this size would cost upwards of \$280 million in development expenditures, but supply renewable energy for nearly 40 000 homes, thus offsetting up to 260 000 tons of greenhouse gases.

The Company goal of a diversified renewable energy group also took shape in our solar energy objectives. Wild Brush Energy was able to sign agreements with leading solar panel manufacture Shanghai Chaori Solar Energy and Auxin Solar of Silicon Valley. The project target size for our solar park is approximately 4MW. This would provide an annual power output upwards of 5.5 GWh. A solar park of this scale will supply approximately 1200 households with renewable energy, and reduce carbon emissions by about 3100 tons annually.

The third phase of the Companies objectives is the development of small-scale hydroelectric projects. Negotiations and talks have taken place regarding this subject; updates are expected in the near future concerning this.

Wild Brush Energy will continue to carefully assessing future project associates and development opportunities in order to best maximize company growth and shareholder value.

About Wild Brush Energy Inc.

Wild Brush Energy Inc. is a diversified energy company whose goal is to identify and develop clean air energy producing alternatives. Wild Brush is presently exploring green energy producing opportunities such as large scale Commercial Wind Farms, Solar Energy Paneling prospects, and Small Scale Hydro Electric projects; both within North America and abroad.
